

energy

Energy Pyramid

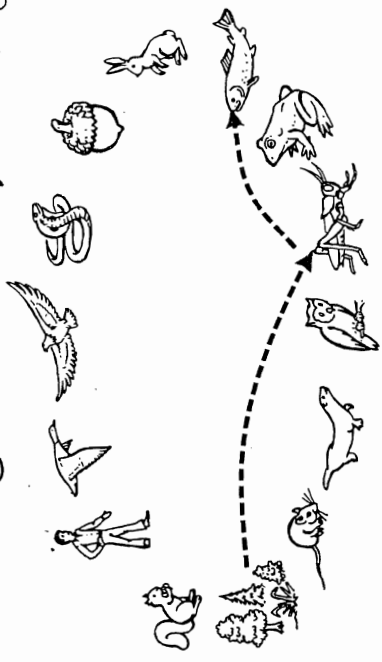

Write the names of the organisms pictured on this page where they belong on the energy pyramid. Some may be listed on more than one level.

Our goal is to see how energy moves through an ecosystem and to understand energy pyramids and food webs.

energy can not be created or destroyed. It can, however, move from object to object, and can change forms

ie: chemicals → electricity → light

Use different colors for each food chain.

draw a food web by drawing arrows from the prey to the predator

- name 2 insects that are herbivores _____
- name 2 insects that are carnivores _____
- what can a green plant do that no other living thing can? _____

define these terms

producer	herbivore	carnivore	omnivore	predator
				prey
