

camp Based on what we have done so far,
this is what I am unsure about:

- why
- how
- what

assessment question

observe two insect images we have posted on the
camp web site. what are two things that make
them appear similar. (Be specific)

sally

You have just finished working with
some pages on observing an insect and
talking about the things that make
an insect what it is.

This is what I have learned so far:

We are now going to move into making
groups out of things. We will learn how
to classify things and we will venture into
the cell biology of living things sally

Based on what we have done so far,
this is what I am unsure about:

- why
- how
- what

assessment questions

what are the differences between biotic and abiotic factors?

what are 5 similarities between animal and plant cells?

what is the purpose of classifying insects?

You have just finished working with some pages on classifying insects and cell biology.

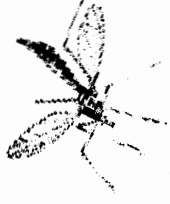

This is what I have learned so far:

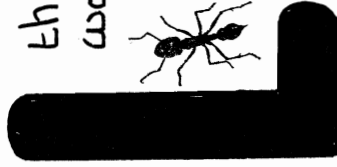

We are now going to move into how energy flows through ecosystems. We will also see the life cycles and behaviors of insects including mating and reproduction.

We have now finished this science unit called bug camp. I still have questions about these things

This is what I have learned because I worked on this bug camp unit.
