

# Field study

my place of the neighborhood

Making observations and studying a field site over a period of time will help you understand what types of insects and plants live there. You observe the changes that take place. In time you can begin to explain the variations you noticed and what caused them.

School yard

# information

Keeping a journal is an important part of a scientist's fieldwork. A field journal is like a diary. You keep all the information you gather (observations, data, drawings). This information will help you remember things at a later date.

# Keeping track of

What do you hypothesize you will learn from studying a field site?
